

EJ Metals
The Dump on Chutes
Features & Benefits

Over 20 years of engineering:

- Installation made easy:
 - Roll pins for easy installation and alignment of butterfly valves and chutes
 - Anti-crush flange spacers to ensure proper torque
 - Square to round tank adapters
- Closed Loop System produce no leaks, no waste, no safety hazards with standing or freezing water
- Round tubes are superior to square channels:
 - higher resistance to flex and torsional twisting
 - minimizes flow resistance
 - minimizes build-up of bits and debris
- Cold weather tested to ensure performance an any temperatures.
- Accommodating - Variable extension lengths to fit a variety of situations
- EBRO butterfly valves
 - Fail-Safe - Air with manual override or straight manual operation
 - Versatile - Low and compact profile
 - Flexible - Valves can be mounted in any clock position
 - Effortless - Less valve opening and closing resistance
 - Strong - 4 times the torque capacity of leading competitors
- No grease required - UHMW poly slides for durable, maintenance free operations
- Flow control - Optional feathering valve for water control
- NFPA compliant for dumping in all three required locations
